

MANAGING RESEARCH DATA

Research data management is framed by several texts:

- **The Institutional Policy on Research Data Management**
- **Open Science Charter**
*"Researchers manage and share their research data **as openly as possible**, so that they are findable, accessible, interoperable and reusable."*
- **Research Integrity Directive**
*"The head of the research project must ensure that the essential data are kept securely for at least **five years** after the end of the project."*

A **team of librarians** will accompany you on-site and remotely through:

- **training** on various aspects of research data management;
- guidance on the **selection of appropriate tools**;
- support for using **Yareta**, the institutional tool for preserving and sharing research data;
- a **proofreading service for Data Management Plans (DMP)** required by funders and ethics committees;
- **tailored support** in case of specific needs.

For any questions or requests, feel free to contact the team:
