

# Information Session for Users of the Sauverny-Ecogia IT System

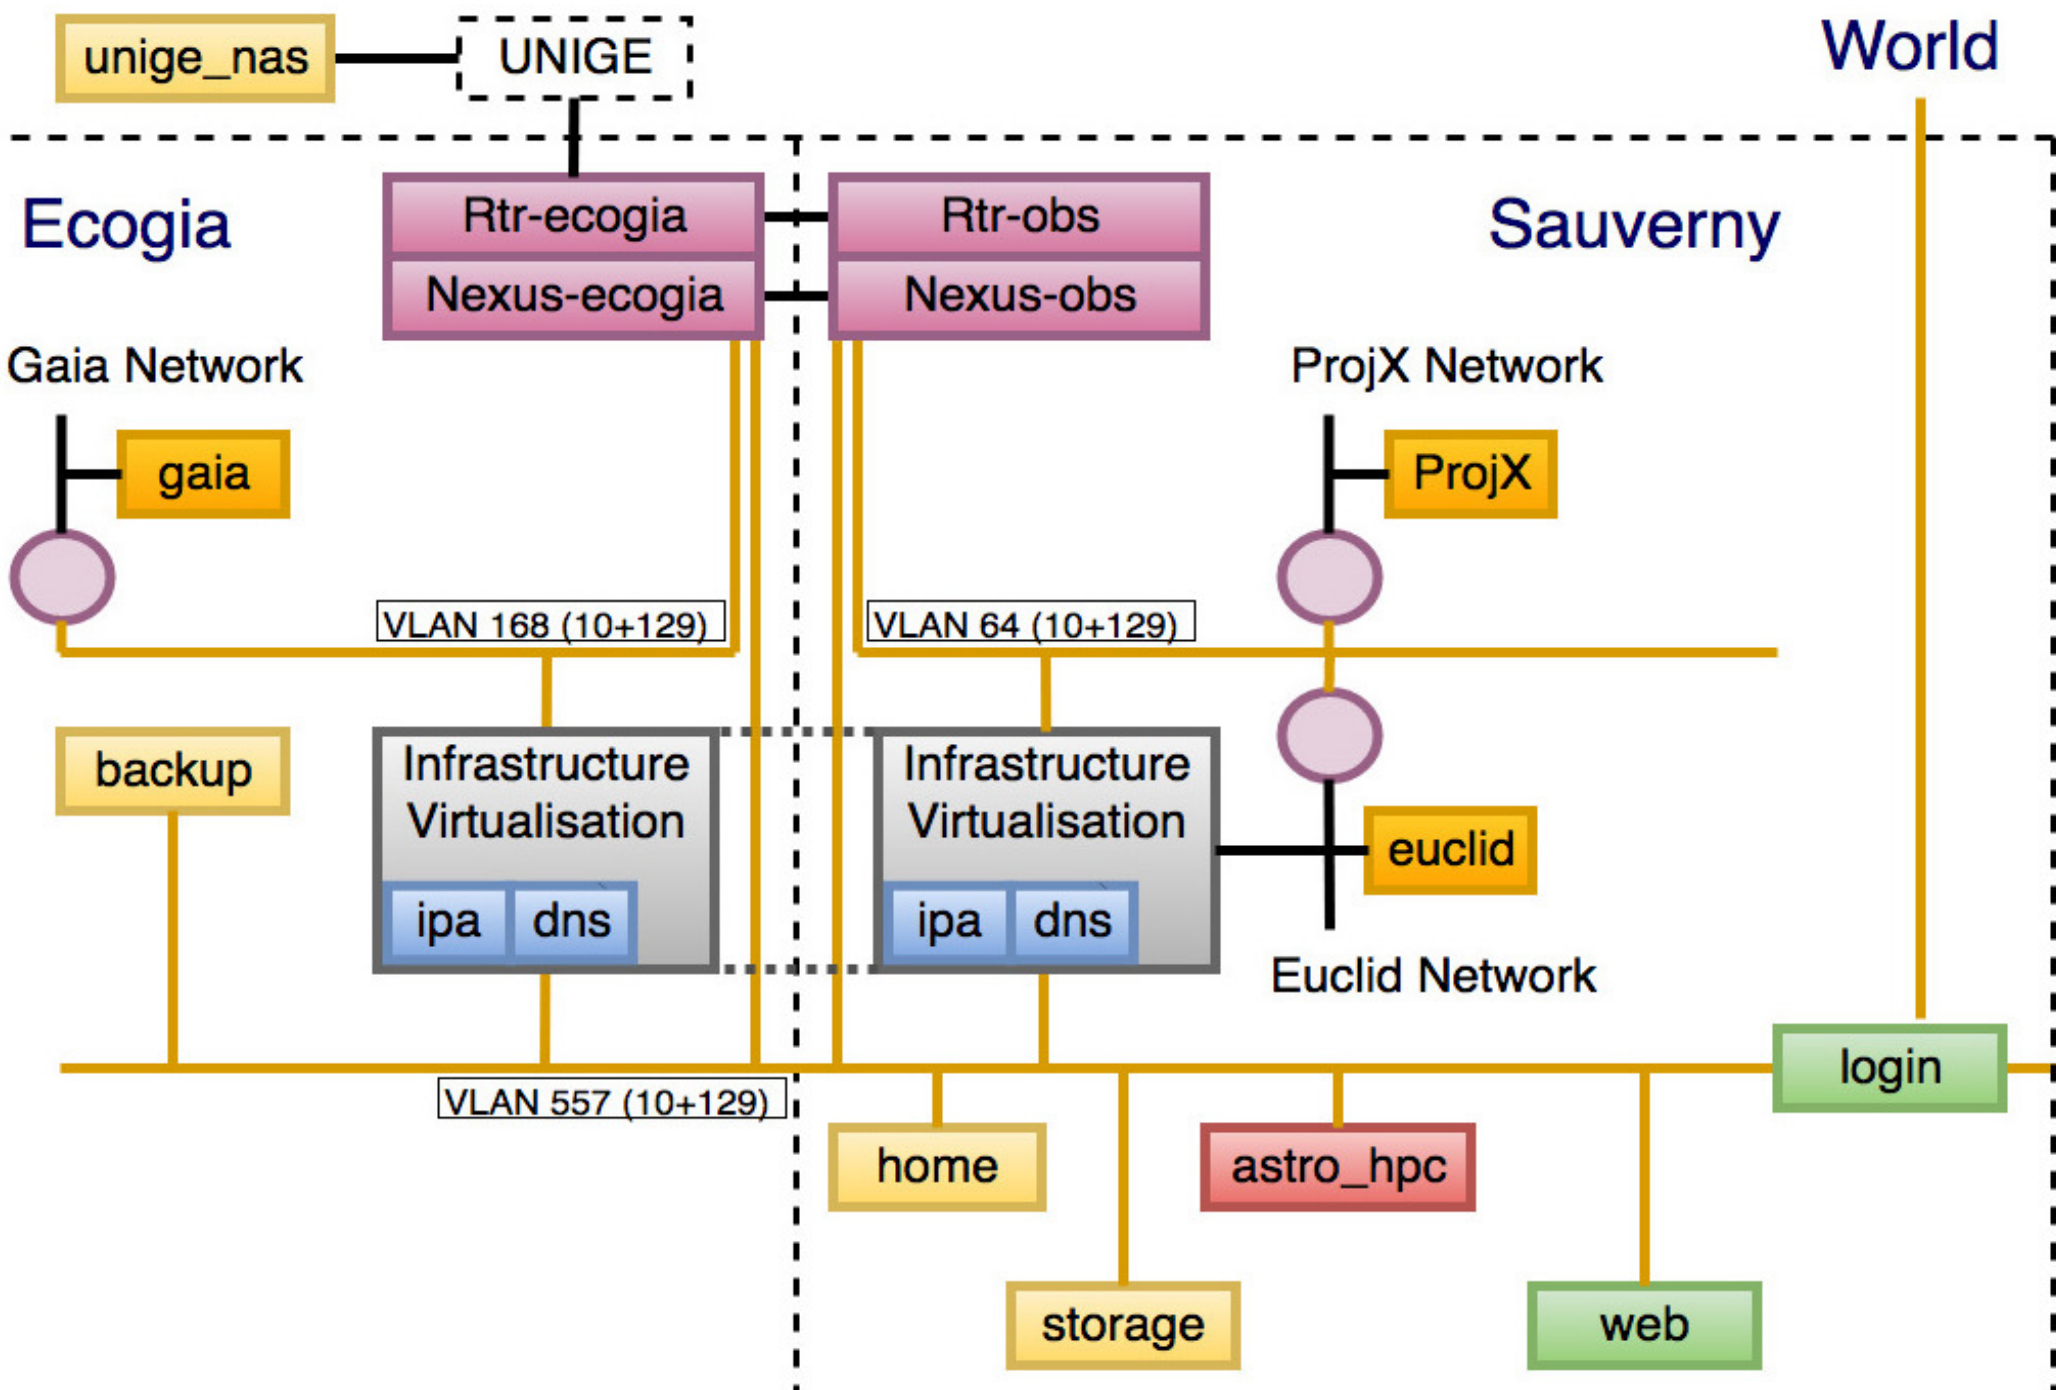

## Presentation and Discussion

# Which Sauverny computing facilities ?

- To support (your) science !
- Assumptions:
  - Laptops for daily task
  - Largest HPC (such as CSCS) for the largest science calculation
- Our computing system includes:
  - Services (SVN, GIT, Redmine, Mattermost...)
  - Sauverny HPC fits in intermediate scientific needs
    - Computing Cluster
    - Data Storage
  - Data processing projects support
- Constantly evolving – we need your inputs !

# Current Main Objectives

- Standardization and simplification
  - Sauverny – Ecogia system merging
    - Moving most hardware to Sauverny !
  - Promote standard solution for
    - Cluster
    - Storage
  - Moving from Proxmox to oVirt (service support)
  - Minimized the number of project specific solutions
- Further develop our computing infrastructure

# User Management Solution

- Replace Sauverny NIS and Ecogia LDAP by a unique FreeIPA solution
- Reproduce existing functionalities as much as possible first
- Look into FreeIPA additional functionalities later
  - Kerberos (kinit, klist)
  - User management delegation
  - sudo right handling
  - ...

# User Management Status

- A cluster of FreeIPA 4 server replicas (load balancing)
  - 700 users :
    - (213 astro, 23 etu, 202 guest, 136 nologin, 115 application)
  - 193 groups : cleaning would be very useful
- 298 passwords collected through the ssp application
- Clients and services migration almost completed !
- In a couple of weeks :
  - “Preserved” users who have not entered a password
  - “ssp” no longer accessible from outside (security issue)

# Computing Cluster

- Current status (> 1000 cores)
  - Sauverny Regor : 760 cores (2015) SL6
  - “Ecogia” : 176 cores (2012, out of support) SL6
  - Euclid : 64 cores (2014) CentOS7
  - Ecogia Gaia : 420 cores (2016 et 2017) CentOS7
- Development of a CentOS7 + SLURM cluster started
- Transition phase with old and new clusters for compilation testing
  - April – May time scale
- Further development of the “new” cluster

# Data Storage Status

- Current status (> 2 PB)
  - Sauverny : 66+146 TB BeeGFS on InfiniBand network
  - Sauverny : 300 TB ZFS
  - NAS académique 166 TB
  - “Ecogia” : 524 TB GPFS on InfiniBand network (2012)
  - Ecogia Gaia : 900 TB (2016 et 2017)

# Data Storage Plans

Name	Properties	Users	Cluster Access	Security	Projects (some users)
/home	Long-term, small volume, no data	all	Read only Slow	High Backup	ZFS
/big_data	Big data, big files Short-term	Projects (Some users)	Fast R/W (InfiniBand)	Medium	BeeGFS
/archive	Big data, any file size Long-term	Projects (some users)	?? (slow)	High Medium	GlusterFS

Additional storage for system (e.g. FreeIPA, oVirt) and backup

# Data Storage Coming Soon

- Free space on GPFS (Fact data moving to CSCS)
- 500+ TB of additional “big\_data” space BeeGFS
- Start of an “archive” GlusterFS storage (Nicolas B.)

# Services implemented in VMs

- Moving from Proxmox to oVirt hypervisor
- oVirt mini-clusters

The screenshot displays the oVirt Open Virtualization Manager interface. The top navigation bar includes the oVirt logo, the user email 'dubath@astro.unige.ch', and links for 'Configure', 'Guide', and 'About'. Below the navigation bar is a search field labeled 'Host:' and a set of tabs for navigation: Dashboard, Data Centers, Clusters, Hosts, Networks, Storage, Disks, Virtual Machines, Pools, Templates, Volumes, Users, and Events. The 'Hosts' tab is currently selected, showing a table of hosts with columns for Name, Comment, Hostname/IP, Cluster, Data Center, Status, Virtual Machines, Memory, CPU, Network, and SPM. The table lists five hosts: ovirhost01 (Up, 0 VMs, 24% Memory), ovirhost02 (Maintenance, 0 VMs, 0% Memory), ovirhost03 (Up, 0 VMs, 4% Memory), ovirhost04 (Up, 7 VMs, 21% Memory), and ovirhost05 (Up, 9 VMs, 45% Memory). A left sidebar shows a tree view of the system hierarchy, including System, Data Centers, Astro, Storage, Networks, Templates, Clusters, External Providers, and Errata. The bottom status bar shows the last message, the current date and time (Feb 7, 2018 6:05:02 PM), the user 'dubath@astro.unige.ch' logged in, and notification icons for Alerts (77), Events, and Tasks (0).

Name	Comment	Hostname/IP	Cluster	Data Center	Status	Virtual Machines	Memory	CPU	Network	SPM
ovirhost01	@Sauverny	10.25.64.41	AstroCluster	Astro	Up	0	24%	0%	0%	SPM
ovirhost02	@Sauverny	10.25.64.42	AstroCluster	Astro	Maintenance	0	0%	0%	0%	Normal
ovirhost03	@Sauverny	10.25.64.43	AstroCluster	Astro	Up	0	4%	0%	0%	Normal
ovirhost04	@Ecogia	10.25.64.44	AstroCluster	Astro	Up	7	21%	0%	0%	Normal
ovirhost05	@Sauverny	10.25.64.45	AstroCluster	Astro	Up	9	45%	1%	0%	Normal

# CDCI and Projects

- CDCI (Stéphane Paltani) as a common infrastructure for space data centers
  - INTEGRAL
  - Gaia
  - CHEOPS
  - Euclid
- Dace
- Telescope data handling and analysis

# Website Rule

- “Astronomie” part of the UNIGE website
  - “concrete5” pages maintained by Gilles
- Nominate content responsible people

unige.ch/sciences/astro		Stéphane P.
	/news	?
	/recherche	Stéphane P.
	/projects	Stéphane P.
	/enseignement	?
	/seminaires	?
	/activitéspublic	?
	/services	?
Intranet		?

# Website Exceptions

- Sauverny-Ecogia websites
  - Future sites developed in Drupal with help from Mohamed Meharga (CDCI)
  - Slowly decrease the number of sites and CMS ! The 60+ current sites probably include obvious security holes
  - Maintain a list of responsible people
- Website coordination meeting to be organized soon !

# New Helpdesk Organization (soon)

- Submit requests via a dedicated email
  - [astro-it-support@unige.ch](mailto:astro-it-support@unige.ch)
- A great help for SysAdmin work organization
- Provide an issue documentation and a follow up

# User's committee

- Ensure that IT system development meet (your) science needs
- Discuss strategies and solutions
- Includes representatives of the different groups (space projects, ground data analysis, numerical modeling and simulations, etc.)
- First meeting soon (April?)

# Security Improvements

- Please use strong passwords !
  - Security rules : 8 (uppercase, lowercase, numbers, special) characters
  - Use a password manager (such as KeePassX)
- Removing deprecated users
- Websites cleaning
- Privileges (root+sudo right) centrally managed
- Firewall centrally managed (soon)
- Kerberos help (soon)

# Connection From Outside

- Solutions:

Server	Client
FreeNX (free NoMachine)	NoMachine
X2Go	X2Go

- (Soon) to be deprecated
  - isdc-nx00 and 01 (NoMachine + ssh)
  - obslogin1 and 2 (ssh)
  - obsnx (NoMachine)
- Future: login01 and 02 (.astro.unige.ch) (ssh + X2Go)

# Short Terms Future

- Be ready for changes : (email communication !)
  - Helpdesk and documentation
  - cluster, storage
  - websites
- Computing facility development
  - R'Equip 2018 proposal (help needed !)
- Much more to do:
  - Backup strategy
  - Tests Cloud solution (OpenStack)
  - Etc.

# Long-Term Future...

- ... is uncertain, but looks bright !
- Ongoing discussions with UNIGE
  - Sauverny computer facility to be developed as a part of the UNIGE computing system
  
- Please communicate early in case of
  - needs, suggestions, criticisms.
